MySpace 3.12.39 (76)
Standalone MyCalc 1.0.37 (38)

Calculator-only Android APK QA · direct user journeys, findings, and coverage boundaries

REPORT DATE: 27 OCTOBER 2026 | DEVICE: Android 14 / API 34 emulator | DIRECT RUN: 40509840646

MYSPACE CALCULATOR

6 PASS · 4 FAIL · 1 BLOCKED

11 selected direct APK cases

MYCALC CALCULATOR

6 PASS · 5 FAIL

11 selected direct APK cases

CALCULATOR UI FLOWS

38 PASS · 2 FAIL · 9 BLOCKED

49 calculator-only probes across 3 jobs

SCREENSHOTS

117

original emulator PNGs preserved; selected screens embedded below

Executive readout

This report stays on the calculator UI: entering and editing expressions, trying selection and clipboard actions, storing/using memory, replaying history, and changing calculator options such as key shape, effects, and theme. It does not test Notes, Scanner, Calendar, or other MySpace apps. Every direct finding is tied to the APK SHA-256, pinned guide snapshot, Android Actions run, and saved screenshot/UI hierarchy. Where a floating control is absent from Android's accessibility tree, the test uses screenshot OCR or labels the probe BLOCKED rather than inventing a failure.

Interpretation rule: PASS/FAIL are direct assertions against the installed binaries. BLOCKED means the emulator or accessibility surface prevented a fair assertion. NOT RUN means no direct APK test was attempted. Upstream source-CI successes or failures are reported separately and never converted into APK outcomes.

Build identity and provenance

Artifact	Package / version	Size	SHA-256
MySpace-v3.12.39-76-lite-dist.apk	app.space.one · 3.12.39 (76)	2,281,228 bytes	7ae98fd05c25554c3b90c32fbc2aeda789c25d0551fab81d071e804106a2a2ad
MyCalc-v1.0.37-38.apk	app.space.calc · 1.0.37 (38)	1,317,383 bytes	09b1dc8f91ac249643cb92aa74670fdd2db8430af6c0b8c7052d8e906efcf1d4
TEST-GUIDE.md	source commit a09e52f2c3f141bfc2d3a95f667a38fcac08b54a	13,555 bytes	a3d0b131c7beb99f8bc12712eebf8c01e5a8873de7996a23f943905768578fc4

Version alignment: The guide copy pasted into chat is headed MySpace 3.12.23 (60) / MyCalc 1.0.21 (22), older than the supplied MySpace APK. To avoid cross-release claims, this run uses the matching guide at the pinned source commit above, headed MySpace 3.12.39 (76) / MyCalc 1.0.37 (38).

Guide: pinned A–H user test guide
MySpace APK: download exact tested binary
Standalone MyCalc APK: download exact tested binary
Direct user-journey run: open run 40509840646 and original job artifacts

Both APKs and the guide were SHA-256 verified in Actions before installation; APK ZIP-integrity checks passed. Device PackageManager version identity was recorded in the per-shard JSON. The user-journey workflow used three Android emulator jobs (max-parallel 3), within the requested 30-job ceiling.

1. Direct calculator results

MySpace · app.space.one · 3.12.39 (76)

Case	Status	Expected	Observed / user-visible note
TC-CALC-001	PASS	14	CALCULATOR | 14 Observed result matched the expected calculator value.
TC-CALC-002	PASS	20	CALCULATOR | 20 Observed result matched the expected calculator value.
TC-CALC-003	PASS	0.3	CALCULATOR | 0.3 Observed result matched the expected calculator value.
TC-CALC-004	PASS	220	CALCULATOR | 220 Observed result matched the expected calculator value.
TC-CALC-005	PASS	3	CALCULATOR | 3 Observed result matched the expected calculator value.
TC-CALC-006	PASS	0.5	CALCULATOR | 0.5 Observed result matched the expected calculator value.
TC-CALC-007	FAIL	History shows 1+1 = 2 after restart	History · 7 | Clear | Close history | = 3 | 200+10% | 27th Oct, 13:15 | = 220 | 0.1+0.2 | 27th Oct, 13:14 | = 0.3 | (2+3)×4 | = 20 | 2+3×4 | = 14 The expected entry was not found after restart. Before restart the display was ['CALCULATOR', '2']; visible history labels were ['History · 7', 'Clear', 'Close history', '= 3', '200+10%', '27th Oct, 13:15', '= 220', '0.1+0.2', '27th Oct, 13:14', '= 0.3', '(2+3)×4', '= 20', '2+3×4', '= 14'].
TC-CALC-011	FAIL	History contains the 123456+1 calculation card	History · 8 | Clear | Close history | = 3 | 200+10% | 27th Oct, 13:15 | = 220 | 0.1+0.2 | 27th Oct, 13:14 | = 0.3 | (2+3)×4 | = 20 | 2+3×4 | = 14 The calculation card was not found in the visible history labels.
TC-CALC-008	FAIL	1	CALCULATOR | 0.9999999999 After 1 ÷ 3 =, the UI result was ['CALCULATOR', '0.3333333333']; multiplying by 3 did not return 1. This is consistent with the screen feeding its rounded display string back into the next expression.
TC-CALC-009	FAIL	Continue from 1e+15 without Error	CALCULATOR | 1e+15+1 | Error Initial 10^15 display was ['CALCULATOR', '1e+15']; adding +1 left an unchanged exponent result or produced Error. This is consistent with exponent-formatted display text not being accepted as a numeric literal by the expression validator/parser.
TC-CALC-010	BLOCKED	Same expressions run in com.google.android.calculator	Official package not installed The official Google Calculator package was not present in the emulator image. No third-party APK mirror was used. Functional assertions therefore use the documented arithmetic expectations; this is not a live side-by-side Google comparison.

Standalone MyCalc · app.space.calc · 1.0.37 (38)

Case	Status	Expected	Observed / user-visible note
TC-CALC-012	FAIL	No requested Android permissions	Requested permissions: app.space.calc.DYNAMIC_RECEIVER_NOT_EXPORTED_PERMISSION The installed standalone package requests one or more Android permissions.
TC-CALC-001	PASS	14	MyCalc | STANDALONE | 14 Observed result matched the expected calculator value.
TC-CALC-002	PASS	20	MyCalc | STANDALONE | 20 Observed result matched the expected calculator value.
TC-CALC-003	PASS	0.3	MyCalc | STANDALONE | 0.3 Observed result matched the expected calculator value.
TC-CALC-004	PASS	220	MyCalc | STANDALONE | 220 Observed result matched the expected calculator value.
TC-CALC-005	PASS	3	MyCalc | STANDALONE | 3 Observed result matched the expected calculator value.
TC-CALC-006	PASS	0.5	MyCalc | STANDALONE | 0.5 Observed result matched the expected calculator value.

Case	Status	Expected	Observed / user-visible note
TC-CALC-007	FAIL	History shows 1+1 = 2 after restart	History · 7 | Clear | Close history | = 3 | 200+10% | 27th Oct, 13:14 | = 220 | 0.1+0.2 | = 0.3 | (2+3)×4 | = 20 | 2+3×4 | 27th Oct, 13:13 | = 14 The expected entry was not found after restart. Before restart the display was ['MyCalc', 'STANDALONE', '2']; visible history labels were ['History · 7', 'Clear', 'Close history', '= 3', '200+10%', '27th Oct, 13:14', '= 220', '0.1+0.2', '= 0.3', '(2+3)×4', '= 20', '2+3×4', '27th Oct, 13:13', '= 14'].
TC-CALC-011	FAIL	History contains the 123456+1 calculation card	History · 8 | Clear | Close history | = 3 | 200+10% | 27th Oct, 13:14 | = 220 | 0.1+0.2 | = 0.3 | (2+3)×4 | = 20 | 2+3×4 | 27th Oct, 13:13 | = 14 The calculation card was not found in the visible history labels.
TC-CALC-008	FAIL	1	MyCalc | STANDALONE | 0.9999999999 After 1 ÷ 3 =, the UI result was ['MyCalc', 'STANDALONE', '0.3333333333']; multiplying by 3 did not return 1. This is consistent with the screen feeding its rounded display string back into the next expression.
TC-CALC-009	FAIL	Continue from 1e+15 without Error	MyCalc | STANDALONE | 1e+15+1 | Error Initial 10^15 display was ['MyCalc', 'STANDALONE', '1e+15']; adding +1 left an unchanged exponent result or produced Error. This is consistent with exponent-formatted display text not being accepted as a numeric literal by the expression validator/parser.

The APK suite includes arithmetic, scientific-key, history persistence/replay and the two retained blind boundary probes. The official Google Calculator comparison is not a pass unless its official package is installed; no AOSP substitute is used. For MyCalc, TC-CALC-012 reports the installed package's requested-permission list; see the detailed note below.

2. Calculator-only journeys and observations

These tests are driven through UIAutomator/adb taps and touchscreen gestures on the installed calculator APKs. Floating selection and caret toolbars are inspected from screenshots because the Android accessibility tree can omit them. Screenshots and UI hierarchy XML remain in the evidence bundle; source-CI results are not counted as APK outcomes.

MySpace calculator input/editing

Guide	Status	User action	Observed / limitation
D1	PASS	Evaluate implicit multiplication	input=CALCULATOR | 2(5+2)2 | = 28; result=CALCULATOR | 28 The user-entered 2(5+2)2 expression evaluated as implicit multiplication to 28.
D2	PASS	Replace a pending operator	CALCULATOR | 10− | = 10 The trailing plus was replaced by minus; no evaluation was required.
D3	FAIL	Evaluate with a trailing plus	CALCULATOR | 5 Pressing equals after 5+ did not produce 10.
D4	PASS	Check Indian digit grouping	CALCULATOR | 1,23,456 | = 1,23,456 Indian digit grouping was visible while typing the six-digit number.
D6	PASS	Evaluate inverse sine in degree mode	inverse key=sin⁻¹; display=CALCULATOR | 30 Inverse sine of 0.5 in degree mode returned 30.
D8	PASS	Delete one character at the caret	CALCULATOR | 12 | = 12 The caret was placed at the end and one Backspace removed exactly one character.
B1	PASS	Hold number to select and show actions	OCR toolbar=Copy; Cut; MAdd; MUse; Paste; hierarchy=MySpace home | MySpace | CALCULATOR | History | World time | More options | 1,23,456 | = 1,23,456 | Toggle the scientific keys | Open the extra keys | AC | ( ) | % | ÷ | 7 | 8 | 9 | × | 4 | 5 | 6 | − | 1 | 2 | 3 | + | 0 | . | ⌫ | = | Apps | Clock | Calculator The screenshot visibly exposed the floating selection toolbar; OCR is used because Android omits this popup from UiAutomator.
B2	BLOCKED	Drag while holding to change the selected portion	The emulator input API could not reproduce the app-specific stationary hold-then-drag gesture; no product failure is inferred from this attempt. The user-facing control was not available to this emulator run.
B4	PASS	Copy then paste within the calculator	CALCULATOR | 1,23,456 | = 1,23,456 Copy then Paste restored the digits within the calculator app; external app handoff was intentionally not tested.
B5	PASS	Cut a held number and type into the gap	CALCULATOR | 7 | = 7 Cut removed the held number and the next keypad digit became the expression.
B6	PASS	Tap the held expression to release selection and place the caret	after tapping selected text and typing 9: CALCULATOR | 12,39,456 | = 12,39,456 The held selection released on an in-selection tap, and the next digit was inserted at an interior caret position.
B7	PASS	Clear a held selection with AC	display=CALCULATOR | 0; OCR after AC=1:23 © w40 ~ MySpace eatcutaror p v AC % QO 80 a0 Calculator AC removed the held text and dismissed the floating selection toolbar.
B9	PASS	Tap inside a number and insert a digit	CALCULATOR | 12,39,456 | = 12,39,456 OCR located the expression and a tap 58% across its visible glyph bounds inserted 9 between existing digits.
B11	PASS	Hold empty expression-box space for caret menu	OCR caret menu=MUse; Paste The screenshot shows the empty-box caret menu; OCR is used because the Android floating menu is omitted from UiAutomator.
C9	PASS	Verify tapping the expression does not open a device keyboard	input_method not shown Android's input-method diagnostics did not report a visible software keyboard after tapping the expression.
E3	PASS	Open the three-dot menu	Haptics: On | Memory | Show as fraction | Key theme | Key shape | Effects | 123 | © | v.46 | CALCULATOR | B | MySpace | Haptics: | On | Memory | Show | as | fraction | Key | theme | Key | shape | AC | Effects | fo) | 5) | 2 | e | a0 | a | 80 | ® | © | g | Calculator | Clock | Apps The overflow menu exposed Effects plus calculator menu actions. This smoke check does not verify the exact item count or reorder behavior.

Guide	Status	User action	Observed / limitation
C10	PASS	Open key-shape picker and select Circle	picker=Circle; Squircle; Pill; Rounded square; No shape; selected=Circle The picker exposed at least four named key silhouettes and accepted a Circle selection. Persistence and pixel-perfect geometry are not inferred from this one view.
H1/H2	PASS	Apply Light and Dark calculator themes	stable-screen pixel change=98.3%; Light SHA-256=59387f009fb05b0bd19b4b050c89a0171eb6c92afda70c14d9b2f60601e2ecad; Dark SHA-256=b8c42e02d702d7eb2d3d0abc68cf1fa946bb137b6be11ad1a9534b009004e25c; expression=['CALCULATOR', '0'] Both Light and Dark choices produced visibly different calculator screens. The displayed expression reset during the settings/home route, so expression persistence is not claimed. Exact palette/caret pixels are not asserted.
Calculator	PASS	Scan visible calculator labels for ad indicators	Scanned 31 visible labels; no ad indicator No ad-like text appeared on the sampled calculator screen; this does not certify the app's network or SDK behavior.

MySpace calculator memory/customization

Guide	Status	User action	Observed / limitation
B12	PASS	Store a number with MAdd and use it in an expression	after MUse=CALCULATOR | 3+1,23,456 | = 1,23,459; after equals=CALCULATOR | 1,23,459 MAdd stored 123456 and MUse replaced the selected operand in 3+4; the grouped result equals 123459.
B12	BLOCKED	Insert a stored value at a mid-expression caret	The hold produced a text-selection toolbar, so MUse insertion at an empty caret was not proven. The user-facing control was not available to this emulator run.
E3	BLOCKED	Open the calculator memory list	Calculator overflow did not expose View memory: ['MySpace home', 'MySpace', 'CALCULATOR', 'History', 'World time', 'More options', '3+4', '= 7', 'Toggle the scientific keys', 'Open the extra keys', 'AC', '( )', '%', '÷', '7', '8', '9', '×', '4', '5', '6', '−', '1', '2', '3', '+', '0', '.', '⌫', '=', 'Apps', 'Clock', 'Calculator'] The user-facing control was not available to this emulator run.
E4	PASS	Choose a calculator keypress effect	choices=✓ Spring · bounce back with overshoot; Pulse · quick fade pulse; bounce; Pulse; fade; pulse; selected one option The Effects picker exposed user-selectable calculator animation options. This smoke test confirms access and selection, not frame-by-frame animation timing.
C11	BLOCKED	Select a calculator key theme	Could not return to calculator controls through MySpace's Apps route: ['Tue, Oct 27', 'Home', 'Phone', 'Messages', 'MySpace', 'Predicted app: MySpace', 'Chrome', 'Camera', 'Search', 'Google app', 'Voice search', 'Google Lens'] The user-facing control was not available to this emulator run.

Standalone MyCalc calculator

Guide	Status	User action	Observed / limitation
F	PASS	Inspect standalone MyCalc identity	World time | MyCalc | STANDALONE | History | More options | 1e+15+1 | Error | Toggle the scientific keys | Close the extra keys | √(| π | ^ | ! | Deg | sin(| cos(| tan(| Inv | e | ln(| log(| AC | ( ) | % | ÷ | 7 | 8 | 9 | × | 4 | 5 | 6 | − | 1 | 2 | 3 | + | 0 | . | ⌫ | = The installed standalone calculator identifies itself in the visible app header.
D1	PASS	Evaluate implicit multiplication	input=MyCalc | STANDALONE | 2(5+2)2 | = 28; result=MyCalc | STANDALONE | 28 The user-entered 2(5+2)2 expression evaluated as implicit multiplication to 28.
D2	PASS	Replace a pending operator	MyCalc | STANDALONE | 10− | = 10 The trailing plus was replaced by minus; no evaluation was required.
D3	FAIL	Evaluate with a trailing plus	MyCalc | STANDALONE | 5 Pressing equals after 5+ did not produce 10.
D4	PASS	Check Indian digit grouping	MyCalc | STANDALONE | 1,23,456 | = 1,23,456 Indian digit grouping was visible while typing the six-digit number.
D6	PASS	Evaluate inverse sine in degree mode	inverse key=sin⁻¹; display=MyCalc | STANDALONE | 30 Inverse sine of 0.5 in degree mode returned 30.
D8	PASS	Delete one character at the caret	MyCalc | STANDALONE | 12 | = 12 The caret was placed at the end and one Backspace removed exactly one character.

Guide	Status	User action	Observed / limitation
B1	PASS	Hold number to select and show actions	OCR toolbar=Copy; Cut; MAdd; MUse; Paste; hierarchy=World time | MyCalc | STANDALONE | History | More options | 1,23,456 | = 1,23,456 | Toggle the scientific keys | Open the extra keys | AC | ( ) | % | ÷ | 7 | 8 | 9 | × | 4 | 5 | 6 | − | 1 | 2 | 3 | + | 0 | . | ⌫ | = The screenshot visibly exposed the floating selection toolbar; OCR is used because Android omits this popup from UiAutomator.
B2	BLOCKED	Drag while holding to change the selected portion	The emulator input API could not reproduce the app-specific stationary hold-then-drag gesture; no product failure is inferred from this attempt. The user-facing control was not available to this emulator run.
B4	PASS	Copy then paste within the calculator	MyCalc | STANDALONE | 1,23,456 | = 1,23,456 Copy then Paste restored the digits within the calculator app; external app handoff was intentionally not tested.
B5	PASS	Cut a held number and type into the gap	MyCalc | STANDALONE | 7 | = 7 Cut removed the held number and the next keypad digit became the expression.
B6	PASS	Tap the held expression to release selection and place the caret	after tapping selected text and typing 9: MyCalc | STANDALONE | 12,39,456 | = 12,39,456 The held selection released on an in-selection tap, and the next digit was inserted at an interior caret position.
B7	PASS	Clear a held selection with AC	display=MyCalc | STANDALONE | 0; OCR after AC=122 © 746 3 FA MyCalc STANDALONE > p v AC 0 % AC removed the held text and dismissed the floating selection toolbar.
B9	PASS	Tap inside a number and insert a digit	MyCalc | STANDALONE | 12,39,456 | = 12,39,456 OCR located the expression and a tap 58% across its visible glyph bounds inserted 9 between existing digits.
B11	PASS	Hold empty expression-box space for caret menu	OCR caret menu=MUse; Paste The screenshot shows the empty-box caret menu; OCR is used because the Android floating menu is omitted from UiAutomator.
C9	PASS	Verify tapping the expression does not open a device keyboard	input_method not shown Android's input-method diagnostics did not report a visible software keyboard after tapping the expression.
E3	PASS	Open the three-dot menu	Haptics: On | Memory | Show as fraction | Key theme | Key shape | Effects | 123 | © | eat | ‘STANDALONE, | MyCalc | Haptics: | On | Memory | Show | as | fraction | Key | theme | Key | shape | Effects The overflow menu exposed Effects plus calculator menu actions. This smoke check does not verify the exact item count or reorder behavior.
C10	PASS	Open key-shape picker and select Circle	picker=Circle; Squircle; Pill; Rounded square; No shape; selected=Circle The picker exposed at least four named key silhouettes and accepted a Circle selection. Persistence and pixel-perfect geometry are not inferred from this one view.
H1/H2	BLOCKED	Apply Light and Dark calculator themes	Settings was not exposed from the calculator's MySpace home: ['Haptics: On', 'Memory', 'Show as fraction', 'Key theme', 'Key shape', 'Effects'] The user-facing control was not available to this emulator run.
Calculator	PASS	Scan visible calculator labels for ad indicators	Scanned 6 visible labels; no ad indicator No ad-like text appeared on the sampled calculator screen; this does not certify the app's network or SDK behavior.
B12	PASS	Store a number with MAdd and use it in an expression	after MUse=MyCalc | STANDALONE | 3+1,23,456 | = 1,23,459; after equals=MyCalc | STANDALONE | 1,23,459 MAdd stored 123456 and MUse replaced the selected operand in 3+4; the grouped result equals 123459.
B12	BLOCKED	Insert a stored value at a mid-expression caret	The hold produced a text-selection toolbar, so MUse insertion at an empty caret was not proven. The user-facing control was not available to this emulator run.
E3	BLOCKED	Open the calculator memory list	Calculator overflow did not expose View memory: ['World time', 'MyCalc', 'STANDALONE', 'History', 'More options', '3+1,23,456', '= 1,23,459', 'Toggle the scientific keys', 'Open the extra keys', 'AC', '( )', '%', '÷', '7', '8', '9', '×', '4', '5', '6', '−', '1', '2', '3', '+', '0', '.', '⌫', '='] The user-facing control was not available to this emulator run.
E4	PASS	Choose a calculator keypress effect	choices=✓ Spring · bounce back with overshoot; Pulse · quick fade pulse; bounce; Pulse; fade; pulse; selected one option The Effects picker exposed user-selectable calculator animation options. This smoke test confirms access and selection, not frame-by-frame animation timing.

Guide	Status	User action	Observed / limitation
C11	BLOCKED	Select a calculator key theme	Could not return to calculator controls through MySpace's Apps route: ['Tue, Oct 27', 'Home', 'Phone', 'Messages', 'MyCalc', 'Predicted app: MyCalc', 'Chrome', 'Camera', 'Search', 'Google app', 'Voice search', 'Google Lens'] The user-facing control was not available to this emulator run.

3. Calculator-guide coverage: what this run proves

Guide	Direct calculator evidence	Boundary / not claimed
B · Editing/memory	Long-press selection is screenshot-OCR checked; in-calculator copy/paste and cut are attempted; AC clear, tap-to-release plus caret insertion, mid-number insertion, caret menu, and both selected-value replacement and empty-caret MUse are probed.	B2 continuous hold-then-drag is blocked if adb cannot reproduce the app's custom hold gesture. Handle dragging, all margins, scroll arbitration, and external-app paste are not claimed unless their rows pass.
C · Expression	No-keyboard check, key-shape and key-theme pickers, calculator entry/editing, percent and scientific-key examples are reported from installed APK actions.	Pixel-level caret blink, exact LED colors, whole-line autoscroll, every bracket/cursor edge case, and exhaustive verification of all eight key-theme choices are not certified.
D · Calculator	Selected D1–D9 behavior, history replay, arithmetic and scientific cases are exercised on the installed binaries; observed values are in the result tables.	D10 timing/race and an official Google Calculator comparison are not claimed as passes; no AOSP substitute is used.
E · History/effects	History persistence/replay, calculator memory list, overflow actions, and opening/selecting an Effects option are probed.	Memory reordering and frame-by-frame animation behavior are not claimed unless explicitly observed in the run.
F · Standalone	The standalone MyCalc binary is directly launched and its calculator flows are tested; its requested permissions come from the installed PackageManager dump.	The guide's literal zero-requested-permissions wording is checked separately from dangerous/runtime permission prompts.
H · Theme/caret	Light and Dark selections are applied through calculator-related settings; stable app-screen pixels are compared and both screenshots retained. The expression may reset while navigating settings.	Exact theme palette, caret color, and instant ink re-resolution are not pixel-certified by this broad visual comparison.

Ads: The label scan is limited to sampled calculator screens. A clean visible-text scan is not a network-level, whole-app or third-party SDK audit; this report does not make a broader ad-free certification.

Source-CI context (separate evidence): At the pinned source commit, the upstream Tests workflow completed with a failure in its UI emulator end-to-end job; its source-contract and JVM unit/end-to-end jobs passed. The Android CI workflow succeeded for Python source contracts and the debug build. These are source-level results—not direct tests of the distributed APKs—and are not counted as APK outcomes.

4. Detailed defect / risk notes

TC-CALC-007 · History persists after activity restart and can restore an expression · FAIL

Expected: History shows 1+1 = 2 after restart
Observed: History · 7 | Clear | Close history | = 3 | 200+10% | 27th Oct, 13:15 | = 220 | 0.1+0.2 | 27th Oct, 13:14 | = 0.3 | (2+3)×4 | = 20 | 2+3×4 | = 14
QA interpretation: The expected entry was not found after restart. Before restart the display was ['CALCULATOR', '2']; visible history labels were ['History · 7', 'Clear', 'Close history', '= 3', '200+10%', '27th Oct, 13:15', '= 220', '0.1+0.2', '27th Oct, 13:14', '= 0.3', '(2+3)×4', '= 20', '2+3×4', '= 14'].

TC-CALC-011 · Grouped history card restores and re-evaluates without Error · FAIL

Expected: History contains the 123456+1 calculation card
Observed: History · 8 | Clear | Close history | = 3 | 200+10% | 27th Oct, 13:15 | = 220 | 0.1+0.2 | 27th Oct, 13:14 | = 0.3 | (2+3)×4 | = 20 | 2+3×4 | = 14
QA interpretation: The calculation card was not found in the visible history labels.

TC-CALC-008 · Chained calculations retain unrounded precision · FAIL

Expected: 1
Observed: CALCULATOR | 0.9999999999
QA interpretation: After 1 ÷ 3 =, the UI result was ['CALCULATOR', '0.3333333333']; multiplying by 3 did not return 1. This is consistent with the screen feeding its rounded display string back into the next expression.

TC-CALC-009 · Scientific-notation result can be used in the next expression · FAIL

Expected: Continue from 1e+15 without Error
Observed: CALCULATOR | 1e+15+1 | Error
QA interpretation: Initial 10^15 display was ['CALCULATOR', '1e+15']; adding +1 left an unchanged exponent result or produced Error. This is consistent with exponent-formatted display text not being accepted as a numeric literal by the expression validator/parser.

TC-CALC-012 · Standalone MyCalc requests no Android permissions · FAIL

Expected: No requested Android permissions
Observed: Requested permissions: app.space.calc.DYNAMIC_RECEIVER_NOT_EXPORTED_PERMISSION
QA interpretation: The installed standalone package requests one or more Android permissions.

TC-CALC-007 · History persists after activity restart and can restore an expression · FAIL

Expected: History shows 1+1 = 2 after restart
Observed: History · 7 | Clear | Close history | = 3 | 200+10% | 27th Oct, 13:14 | = 220 | 0.1+0.2 | = 0.3 | (2+3)×4 | = 20 | 2+3×4 | 27th Oct, 13:13 | = 14
QA interpretation: The expected entry was not found after restart. Before restart the display was ['MyCalc', 'STANDALONE', '2']; visible history labels were ['History · 7', 'Clear', 'Close history', '= 3', '200+10%', '27th Oct, 13:14', '= 220', '0.1+0.2', '= 0.3', '(2+3)×4', '= 20', '2+3×4', '27th Oct, 13:13', '= 14'].

TC-CALC-011 · Grouped history card restores and re-evaluates without Error · FAIL

Expected: History contains the 123456+1 calculation card
Observed: History · 8 | Clear | Close history | = 3 | 200+10% | 27th Oct, 13:14 | = 220 | 0.1+0.2 | = 0.3 | (2+3)×4 | = 20 | 2+3×4 | 27th Oct, 13:13 | = 14
QA interpretation: The calculation card was not found in the visible history labels.

TC-CALC-008 · Chained calculations retain unrounded precision · FAIL

Expected: 1
Observed: MyCalc | STANDALONE | 0.9999999999
QA interpretation: After 1 ÷ 3 =, the UI result was ['MyCalc', 'STANDALONE', '0.3333333333']; multiplying by 3 did not return 1. This is consistent with the screen feeding its rounded display string back into the next expression.

TC-CALC-009 · Scientific-notation result can be used in the next expression · FAIL

Expected: Continue from 1e+15 without Error
Observed: MyCalc | STANDALONE | 1e+15+1 | Error
QA interpretation: Initial 10^15 display was ['MyCalc', 'STANDALONE', '1e+15']; adding +1 left an unchanged exponent result or produced Error. This is consistent with exponent-formatted display text not being accepted as a numeric literal by the expression validator/parser.

D3 · Evaluate with a trailing plus · FAIL

Expected: 5+ then equals shows 10
Observed: CALCULATOR | 5
QA note: Pressing equals after 5+ did not produce 10.

D3 · Evaluate with a trailing plus · FAIL

Expected: 5+ then equals shows 10
Observed: MyCalc | STANDALONE | 5
QA note: Pressing equals after 5+ did not produce 10.

MyCalc permission wording

TC-CALC-012: FAIL
Direct dump interpretation: TC-CALC-012 FAIL: requested=app.space.calc.DYNAMIC_RECEIVER_NOT_EXPORTED_PERMISSION; protection level(s)=signature; runtime section=empty. This is PackageManager manifest/package evidence; the screen flow did not test a system permission prompt.
Guide claim: The literal “zero requested permissions” claim conflicts with the installed APK's PackageManager list. Runtime prompt behavior was not exercised by this PackageManager audit; the test does not infer that any listed permission is dangerous.

Important environment boundary

Android 14 emulator input and accessibility exposure can differ from a physical touch. BLOCKED/ERROR is not treated as a confirmed product defect without a clear app-controlled failure; an unexecuted guide step stays untested. This report intentionally excludes Notes, Scanner, and all other non-calculator app workflows. Runner logcat is supplemental evidence, not a substitute for product behavior; no external app/share target is used.

MyCalc · PackageManager permission dump

Extract from the original runtime artifact; complete dump is in the published evidence folder.

6. Machine-evidence manifest and reproducibility

The published sidecar folder contains 3 per-job user journey JSON reports, their calculator-case JSON outputs, markdown summaries, original screenshots, UI hierarchy XML, and an evidence-manifest.json with byte sizes and SHA-256 hashes. Use the single PDF link for the readable report; the linked GitHub run and report-folder sidecars provide raw rerun proof.

Suite	App	Evidence files	Screenshots
myspace-core	MySpace	82	45
myspace-features	MySpace	32	15
mycalc	MyCalc	108	57

Method: three API 34 emulator shards, screenshot capture after user actions, visible UI labels and hierarchy evidence where available, per-case JSON outputs, exact binary SHA verification, and a pinned guide/source commit. The app's source tests are useful corroboration only; this report's PASS/FAIL statuses come from direct installed APK interactions.
