MySpace 3.12.35 (72)
Standalone MyCalc 1.0.33 (34)

User-first Android APK QA · detailed findings, direct emulator proof, and coverage boundaries

REPORT DATE: 27 OCTOBER 2026 | DEVICE: Android 14 / API 34 emulator | DIRECT RUN: 40465430161

MYSPACE CALCULATOR	MYCALC CALCULATOR	USER JOURNEYS	SCREENSHOTS
8 PASS · 2 FAIL · 1 BLOCKED 11 selected direct APK cases	8 PASS · 3 FAIL 11 selected direct APK cases	29 PASS · 6 FAIL · 12 BLOCKED 47 UI-facing probes across 3 jobs	73 original emulator PNGs preserved; selected screens embedded below

Executive readout

This report exercises the distributed APKs as a user would: tapping calculator keys, holding/dragging the expression, opening the Apps hub, entering feature landing screens, and switching calculator themes. Every direct finding below is tied to the APK SHA-256, exact upstream guide snapshot, Android Actions run, and saved screenshot/UI hierarchy. A screen-open smoke check is not presented as proof that the feature's deeper workflow works.

Interpretation rule: PASS/FAIL are direct assertions against the installed binaries. BLOCKED means the emulator or accessibility surface prevented a fair assertion. NOT RUN means no direct APK test was attempted. Green upstream CI is useful corroboration, but it is separately labeled source-CI—not converted into an APK pass.

Build identity and provenance

Artifact	Package / version	Size	SHA-256
MySpace-v3.12.35-72-lite-dist.apk	app.space.one · 3.12.35 (72)	2,274,980 bytes	f3257177dc098cf62f54a6f77df526195323d36b23ed5a69f9ff07ddf96b45fb
MyCalc-v1.0.33-34.apk	app.space.calc · 1.0.33 (34)	1,311,395 bytes	99c65435e455e241dd3eb65ea6494abcabf2099f5024f6a82c6cf8a621a6bf6b
TEST-GUIDE.md	source commit 0727a2e3b9974d6df70153d76dc8e629e0a0b839	11,842 bytes	d494cf934f12f0c5b1e77da2254d026438d1c10d233c9b53e4620beb7014db92

Guide: pinned A–H user test guide
MySpace APK: download exact tested binary
Standalone MyCalc APK: download exact tested binary
Direct user-journey run: open run 40465430161 and original job artifacts

Both APKs and the guide were SHA-256 verified in Actions before installation; APK ZIP-integrity checks passed. Device PackageManager version identity was recorded in the per-shard JSON. The user-journey workflow used three Android emulator jobs (max-parallel 3), within the requested 30-job ceiling.

1. Direct calculator results

MySpace · app.space.one · 3.12.35 (72)

Case	Status	Expected	Observed / user-visible note
TC-CALC-001	PASS	14	CALCULATOR | 14 Observed result matched the expected calculator value.
TC-CALC-002	PASS	20	CALCULATOR | 20 Observed result matched the expected calculator value.
TC-CALC-003	PASS	0.3	CALCULATOR | 0.3 Observed result matched the expected calculator value.
TC-CALC-004	PASS	220	CALCULATOR | 220 Observed result matched the expected calculator value.
TC-CALC-005	PASS	3	CALCULATOR | 3 Observed result matched the expected calculator value.
TC-CALC-006	PASS	0.5	CALCULATOR | 0.5 Observed result matched the expected calculator value.
TC-CALC-007	PASS	History shows 1+1 = 2 and restores the expression	history=History · 7 | Clear | Close history | = 0.3 | 200+10% | 27th Oct, 07:13 | = 220 | √(9) | = 3 | sin(30) | = 0.5 | 1+1 | 27th Oct, 07:14 | = 2; restored=CALCULATOR | 1+1 | = 2 The history entry survived process restart and restored its expression.
TC-CALC-011	PASS	History card re-evaluates to 123457 without Error	CALCULATOR | 1,23,457 The grouped expression was restored and evaluated successfully; display commas did not contaminate the calculation.
TC-CALC-008	FAIL	1	CALCULATOR | 0.9999999999 After 1 ÷ 3 =, the UI result was ['CALCULATOR', '0.3333333333']; multiplying by 3 did not return 1. This is consistent with the screen feeding its rounded display string back into the next expression.
TC-CALC-009	FAIL	Continue from 1e+15 without Error	CALCULATOR | 1e+15+1 | Error Initial 10^15 display was ['CALCULATOR', '1e+15']; adding +1 left an unchanged exponent result or produced Error. This is consistent with exponent-formatted display text not being accepted as a numeric literal by the expression validator/parser.
TC-CALC-010	BLOCKED	Same expressions run in com.google.android.calculator	Official package not installed The official Google Calculator package was not present in the emulator image. No third-party APK mirror was used. Functional assertions therefore use the documented arithmetic expectations; this is not a live side-by-side Google comparison.

Standalone MyCalc · app.space.calc · 1.0.33 (34)

Case	Status	Expected	Observed / user-visible note
TC-CALC-012	FAIL	No requested Android permissions	Requested permissions: app.space.calc.DYNAMIC_RECEIVER_NOT_EXPORTED_PERMISSION The installed standalone package requests one or more Android permissions.
TC-CALC-001	PASS	14	MyCalc | STANDALONE | 14 Observed result matched the expected calculator value.
TC-CALC-002	PASS	20	MyCalc | STANDALONE | 20 Observed result matched the expected calculator value.
TC-CALC-003	PASS	0.3	MyCalc | STANDALONE | 0.3 Observed result matched the expected calculator value.
TC-CALC-004	PASS	220	MyCalc | STANDALONE | 220 Observed result matched the expected calculator value.
TC-CALC-005	PASS	3	MyCalc | STANDALONE | 3 Observed result matched the expected calculator value.
TC-CALC-006	PASS	0.5	MyCalc | STANDALONE | 0.5 Observed result matched the expected calculator value.
TC-CALC-007	PASS	History shows 1+1 = 2 and restores the expression	history=History · 7 | Clear | Close history | = 0.3 | 200+10% | 27th Oct, 07:13 | = 220 | √(9) | = 3 | sin(30) | = 0.5 | 1+1 | 27th Oct, 07:14 | = 2; restored=MyCalc | STANDALONE | 1+1 | = 2 The history entry survived process restart and restored its expression.

Case	Status	Expected	Observed / user-visible note
TC-CALC-011	PASS	History card re-evaluates to 123457 without Error	MyCalc | STANDALONE | 1,23,457 The grouped expression was restored and evaluated successfully; display commas did not contaminate the calculation.
TC-CALC-008	FAIL	1	MyCalc | STANDALONE | 0.9999999999 After 1 ÷ 3 =, the UI result was ['MyCalc', 'STANDALONE', '0.3333333333']; multiplying by 3 did not return 1. This is consistent with the screen feeding its rounded display string back into the next expression.
TC-CALC-009	FAIL	Continue from 1e+15 without Error	MyCalc | STANDALONE | 1e+15+1 | Error Initial 10^15 display was ['MyCalc', 'STANDALONE', '1e+15']; adding +1 left an unchanged exponent result or produced Error. This is consistent with exponent-formatted display text not being accepted as a numeric literal by the expression validator/parser.

The APK suite includes arithmetic, scientific-key, history persistence/replay and the two retained blind boundary probes. The official Google Calculator comparison is not a pass unless its official package is installed; no AOSP substitute is used. For MyCalc, TC-CALC-012 reports the installed package's requested-permission list; see the detailed note below.

2. User-facing journeys and observations

These tests are driven through UIAutomator/adb taps and touchscreen gestures on the installed release APK. Screenshots and UI hierarchy XML files are retained in the evidence bundle; the action log does not silently promote source tests into APK outcomes.

MySpace calculator/editing

Guide	Status	User action	Observed / limitation
D1	PASS	Evaluate implicit multiplication	input=CALCULATOR | 2(5+2)2 | = 28; result=CALCULATOR | 28 The user-entered 2(5+2)2 expression evaluated as implicit multiplication to 28.
D2	PASS	Replace a pending operator	CALCULATOR | 10− | = 10 The trailing plus was replaced by minus; no evaluation was required.
D3	FAIL	Evaluate with a trailing plus	CALCULATOR | 5 Pressing equals after 5+ did not produce 10.
D4	PASS	Check Indian digit grouping	CALCULATOR | 1,23,456 | = 1,23,456 Indian digit grouping was visible while typing the six-digit number.
D6	PASS	Evaluate inverse sine in degree mode	inverse key=sin⁻¹; display=CALCULATOR | 30 Inverse sine of 0.5 in degree mode returned 30.
D8	PASS	Delete one character at the caret	CALCULATOR | 12 | = 12 The caret was placed at the end and one Backspace removed exactly one character.
B1	FAIL	Hold number to select and show actions	MySpace home; MySpace; CALCULATOR; History; World time; More options; 1,23,456; = 1,23,456; Toggle the scientific keys; Open the extra keys; AC; ( ); %; ÷; 7; 8; 9; ×; 4; 5; 6; −; 1; 2; 3; +; 0; .; ⌫; =; Apps; Clock; Calculator The expected selection action menu did not appear after a 650 ms hold on the typed number.
B2	FAIL	Drag while holding to change the selected portion	MySpace home; MySpace; CALCULATOR; History; World time; More options; 1,23,456; = 1,23,456; Toggle the scientific keys; Open the extra keys; AC; ( ); %; ÷; 7; 8; 9; ×; 4; 5; 6; −; 1; 2; 3; +; 0; .; ⌫; =; Apps; Clock; Calculator No selection action UI was visible after the hold-then-drag gesture.
B4	BLOCKED	Copy then paste the selected digits	Copy was not offered by the selection menu; clipboard round-trip was not attempted. The user-facing control was not available to this emulator run.
B5	BLOCKED	Cut a held number and type into the gap	Cut was not offered by the selection menu. The user-facing control was not available to this emulator run.
B7	BLOCKED	Clear a held selection with AC	No selection menu was exposed; AC-while-selected could not be attempted. The user-facing control was not available to this emulator run.
B9	PASS	Tap inside a number and insert a digit	CALCULATOR | 12,39,456 | = 12,39,456 A tap within the visible number inserted 9 before the final character instead of appending at the end.
B11	BLOCKED	Hold empty expression-box space for caret menu	Caret menu items were not exposed by UIAutomator/OCR: ['MySpace home', 'MySpace', 'CALCULATOR', 'History', 'World time', 'More options', '0', 'Toggle the scientific keys', 'Open the extra keys', 'AC', '( )', '%', '÷', '7', '8', '9', '×', '4', '5', '6', '−', '1', '2', '3', '+', '.', '⌫', '=', 'Apps', 'Clock', 'Calculator'] The user-facing control was not available to this emulator run.
C9	PASS	Verify tapping the expression does not open a device keyboard	input_method not shown Android's input-method diagnostics did not report a visible software keyboard after tapping the expression.
E3	PASS	Open the three-dot menu	Haptics: On | Clear memory | View memory | Show as fraction | Key shape | Effects The overflow menu opened and exposed Effects plus calculator menu actions. This smoke check does not verify the exact item count or reorder behavior.
C10	PASS	Open key-shape picker and select Circle	picker=Circle; Squircle; Pill; Rounded square; No shape; selected=Circle The new picker exposed at least four named key silhouettes and accepted a Circle selection. Persistence and pixel-perfect geometry are not inferred from this one view.
H1/H2	BLOCKED	Switch between Light and Dark themes	Settings entry was not visible: ['MySpace home', 'MySpace', 'CALCULATOR', 'History', 'World time', 'More options', '0', 'Toggle the scientific keys', 'Open the extra keys', 'AC', '( )', '%', '÷', '7', '8', '9', '×', '4', '5', '6', '−', '1', '2', '3', '+', '.', '⌫', '=', 'Apps', 'Clock', 'Calculator'] The user-facing control was not available to this emulator run.

MySpace app surfaces

Guide	Status	User action	Observed / limitation
A2	PASS	Inspect MySpace header identity	MySpace home | MySpace | CALCULATOR | History | World time | More options | 14 | Toggle the scientific keys | Open the extra keys | AC | ( ) | % | ÷ | 7 | 8 | 9 | × | 4 | 5 | 6 | − | 1 | 2 | 3 | + | 0 | . | ⌫ | = | Apps | Clock | Calculator The app header exposes the MySpace identity; the accompanying screenshot shows the installed app's user-visible mark. The launcher-drawer icon was not separately pixel-tested.
G	PASS	Open the Apps hub	feature entries=Notes; Calendar; Music; Recorder; Scanner; Files; labels=Apps | World time | Clock | Calculator | Notes | Habits | Expenses | Calendar | Tasks | Weather | Recorder | Files | Documents | Messages | Music | Scanner | Email | RECENT The user-visible Apps destination exposed multiple guide features; their individual landing screens are reported separately.
A/G	PASS	Check sampled home surfaces for ad indicators	Scanned 18 accessible labels; no ad/advertisement/sponsored label found No ad indicators appeared in the sampled Apps hub labels. This does not prove an app-wide or network-level ad audit.
G	BLOCKED	Open Notes from Apps	Notes entry was not exposed in the Apps hub after four screen scrolls. The user-facing control was not available to this emulator run.
G	PASS	Open Calendar from Apps	opened=Calendar; screen changed=True; calculator screen=False; labels=MySpace home | MySpace | CALENDAR | « | ‹ | October | 2026 | › | » | Month | Week | Day | ⚙ | Today | Sun | Mon | Tue | Wed | Thu | Fri | Sat | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 | 15 | 16 | 17 | 18 | 19 | 20 | 21 | 22 | 23 | 24 | 25 | 26 | 27 | 28 | 29 | 30 | 31 | Tuesday 27 Oct | 0 events | Add event | World time | Apps | Clock | Calendar The feature landing screen opened from the Apps hub. Its deep workflow (e.g., reminders, recording, scanning or editing) is not inferred from opening it.
G	PASS	Open Music from Apps	opened=Music; screen changed=True; calculator screen=False; labels=MySpace home | MySpace | MUSIC | Music | 0 tracks · Repeat all | Grant music access | Without it the player can only see files you add by hand. | Nothing playing | Your library, your own files, and streams you add yourself. | ⏮ | ▶ | ⏭ | ⇄ | ⟳ | Add music files | Add a stream URL | No playable audio yet. Add your own music files, or a stream URL you trust. | World time | Apps | Clock The feature landing screen opened from the Apps hub. Its deep workflow (e.g., reminders, recording, scanning or editing) is not inferred from opening it.
G	PASS	Open Recorder from Apps	opened=Recorder; screen changed=True; calculator screen=False; labels=MySpace home | MySpace | RECORDER | Recorder | No recordings yet. | 0:00 | Microphone permission needed. | Record | World time | Apps | Clock The feature landing screen opened from the Apps hub. Its deep workflow (e.g., reminders, recording, scanning or editing) is not inferred from opening it.
G	PASS	Open Scanner from Apps	opened=Scanner; screen changed=True; calculator screen=False; labels=MySpace home | MySpace | SCANNER | Scanner | No pages yet. | Pick images, then save them as one PDF. | Take a page with the system camera or pick existing images, then save them as one PDF. Captures land in a private inbox through a hand-rolled provider. In-app live-preview capture stays deferred: wiring a camera pipeline with no device to see it on is a gamble, not a slice. | Take a photo | Pick images | A4 | Save PDF | Saved PDFs | None yet. | World time | Apps | Clock The feature landing screen opened from the Apps hub. Its deep workflow (e.g., reminders, recording, scanning or editing) is not inferred from opening it.
G	PASS	Open Files from Apps	opened=Files; screen changed=True; calculator screen=False; labels=MySpace home | MySpace | FILES | Files | 0 files · 0 B | search files | × | Images | 0 files | › | Videos | Audio | Documents | Sheets | Other | Internal storage | World time | Apps | Clock The feature landing screen opened from the Apps hub. Its deep workflow (e.g., reminders, recording, scanning or editing) is not inferred from opening it.
G	BLOCKED	Open Settings and Diagnostics	Settings entry was not visible from Apps or the calculator overflow. The user-facing control was not available to this emulator run.
A/G	PASS	Sample a feature screen for ad indicators	Scanned current screen: 6 accessible labels; no ad indicator No ad-like labels were visible on the final sampled feature screen; this is not a complete advertising/privacy audit.

Standalone MyCalc

Guide	Status	User action	Observed / limitation
F	PASS	Inspect standalone MyCalc identity	World time | MyCalc | STANDALONE | History | More options | 1e+15+1 | Error | Toggle the scientific keys | Close the extra keys | √(| π | ^ | ! | Deg | sin(| cos(| tan(| Inv | e | ln(| log(| AC | ( ) | % | ÷ | 7 | 8 | 9 | × | 4 | 5 | 6 | − | 1 | 2 | 3 | + | 0 | . | ⌫ | = The installed standalone calculator identifies itself in the visible app header.
F	PASS	Sample standalone calculator for ad indicators	Scanned 41 accessible labels; no ad indicator No ad label was found on the sampled standalone calculator screen; not a full network/app-wide audit.
D1	PASS	Evaluate implicit multiplication	input=MyCalc | STANDALONE | 2(5+2)2 | = 28; result=MyCalc | STANDALONE | 28 The user-entered 2(5+2)2 expression evaluated as implicit multiplication to 28.
D2	PASS	Replace a pending operator	MyCalc | STANDALONE | 10− | = 10 The trailing plus was replaced by minus; no evaluation was required.
D3	FAIL	Evaluate with a trailing plus	MyCalc | STANDALONE | 5 Pressing equals after 5+ did not produce 10.
D4	PASS	Check Indian digit grouping	MyCalc | STANDALONE | 1,23,456 | = 1,23,456 Indian digit grouping was visible while typing the six-digit number.
D6	PASS	Evaluate inverse sine in degree mode	inverse key=sin⁻¹; display=MyCalc | STANDALONE | 30 Inverse sine of 0.5 in degree mode returned 30.
D8	PASS	Delete one character at the caret	MyCalc | STANDALONE | 12 | = 12 The caret was placed at the end and one Backspace removed exactly one character.
B1	FAIL	Hold number to select and show actions	World time; MyCalc; STANDALONE; History; More options; 1,23,456; = 1,23,456; Toggle the scientific keys; Open the extra keys; AC; ( ); %; ÷; 7; 8; 9; ×; 4; 5; 6; −; 1; 2; 3; +; 0; .; ⌫; = The expected selection action menu did not appear after a 650 ms hold on the typed number.
B2	FAIL	Drag while holding to change the selected portion	World time; MyCalc; STANDALONE; History; More options; 1,23,456; = 1,23,456; Toggle the scientific keys; Open the extra keys; AC; ( ); %; ÷; 7; 8; 9; ×; 4; 5; 6; −; 1; 2; 3; +; 0; .; ⌫; = No selection action UI was visible after the hold-then-drag gesture.
B4	BLOCKED	Copy then paste the selected digits	Copy was not offered by the selection menu; clipboard round-trip was not attempted. The user-facing control was not available to this emulator run.
B5	BLOCKED	Cut a held number and type into the gap	Cut was not offered by the selection menu. The user-facing control was not available to this emulator run.
B7	BLOCKED	Clear a held selection with AC	No selection menu was exposed; AC-while-selected could not be attempted. The user-facing control was not available to this emulator run.
B9	PASS	Tap inside a number and insert a digit	MyCalc | STANDALONE | 12,39,456 | = 12,39,456 A tap within the visible number inserted 9 before the final character instead of appending at the end.
B11	BLOCKED	Hold empty expression-box space for caret menu	Caret menu items were not exposed by UIAutomator/OCR: ['World time', 'MyCalc', 'STANDALONE', 'History', 'More options', '0', 'Toggle the scientific keys', 'Open the extra keys', 'AC', '( )', '%', '÷', '7', '8', '9', '×', '4', '5', '6', '−', '1', '2', '3', '+', '.', '⌫', '='] The user-facing control was not available to this emulator run.
C9	PASS	Verify tapping the expression does not open a device keyboard	input_method not shown Android's input-method diagnostics did not report a visible software keyboard after tapping the expression.
E3	PASS	Open the three-dot menu	Haptics: On | Clear memory | View memory | Show as fraction | Key shape | Effects The overflow menu opened and exposed Effects plus calculator menu actions. This smoke check does not verify the exact item count or reorder behavior.
C10	PASS	Open key-shape picker and select Circle	picker=Circle; Squircle; Pill; Rounded square; No shape; selected=Circle The new picker exposed at least four named key silhouettes and accepted a Circle selection. Persistence and pixel-perfect geometry are not inferred from this one view.

Guide	Status	User action	Observed / limitation
H1/H2	BLOCKED	Switch between Light and Dark themes	Settings entry was not visible: ['World time', 'MyCalc', 'STANDALONE', 'History', 'More options', '0', 'Toggle the scientific keys', 'Open the extra keys', 'AC', '( )', '%', '÷', '7', '8', '9', '×', '4', '5', '6', '−', '1', '2', '3', '+', '.', '⌫', '='] The user-facing control was not available to this emulator run.

3. Guide A–H coverage: what this run proves

Guide	Direct APK evidence in this report	Boundary / not claimed
A · Logo	MySpace header identity and in-app mark screenshot (A2).	Launcher/app-drawer icon artwork and tap-to-home behavior are not pixel-certified.
B · Selection	Stationary hold, hold-and-drag, copy/paste round-trip, cut, AC clear, mid-number insertion and empty-box hold are probed on the APK where the UI exposed controls.	External Notes/Messages paste, both handles, all margins, selection/scroll arbitration and memory replacement are not fully certified by these samples.
C · Expression	Keyboard visibility, key-shape menu, numeric and percent interactions are exercised; source screenshots/hierarchies retained.	Caret blink geometry, exact LED colors, whole-line autoscroll and every bracket/cursor edge case are not pixel-certified.
D · Calculator	D1–D4, D5 square-root, D6 degree/inverse sine, D7 clear, D8 Backspace, D9 history replay, and the two retained blind boundary probes are exercised on both installed packages; actual outcomes are in the result tables.	D10 timing/race behavior and the live official-Google comparison are not claimed as passes; Google comparison is blocked if the official package is absent.
E · History/effects	Calculator suite covers process-restart history and history-card replay. Overflow menu is opened as a user journey.	All-history ordering, swipe-down timing, memory reorder and four animation styles are not certified unless specifically shown in results.
F · Standalone	MyCalc launches, its calculator flows are exercised, and PackageManager requested permissions are captured.	The guide's literal “zero permissions” wording is checked against the requested list; runtime-permission records are reported only if the dump exposes them.
G · MySpace apps	Apps hub and feature landing screens for Notes, Calendar, Music, Recorder, Scanner, Files and Diagnostics are attempted from the APK UI.	Opening a screen does not prove create/save/reminder/transport/record/crop/PDF/editor/share workflows. Camera/microphone/environment limits are called out.
H · Theme/caret	Light/Dark theme choices are exercised and screenshots preserved if options are accessible.	Theme bitmap color/caret exactness and instant ink re-resolution are not certified by a byte-different screenshot alone.

Ads: The test harness scans visible accessible labels on sampled MySpace and MyCalc screens for “ad”, “advertisement” or “sponsored”. A clean text scan is not a network-level, whole-app or third-party SDK audit; this report makes no broader ad-free certification.

Source-CI corroboration (separate evidence): At the exact source commit, the upstream Tests workflow completed green, including its JVM/end-to-end and UI emulator jobs; the Android CI workflow also completed green for Python source contracts, unit tests and a debug build. These are source-build results, not direct tests of the two distributed binaries used above.

4. Detailed defect / risk notes

TC-CALC-008 · Chained calculations retain unrounded precision · FAIL

Expected: 1
Observed: CALCULATOR | 0.9999999999
QA interpretation: After 1 ÷ 3 =, the UI result was ['CALCULATOR', '0.3333333333']; multiplying by 3 did not return 1. This is consistent with the screen feeding its rounded display string back into the next expression.

TC-CALC-009 · Scientific-notation result can be used in the next expression · FAIL

Expected: Continue from 1e+15 without Error
Observed: CALCULATOR | 1e+15+1 | Error
QA interpretation: Initial 10^15 display was ['CALCULATOR', '1e+15']; adding +1 left an unchanged exponent result or produced Error. This is consistent with exponent-formatted display text not being accepted as a numeric literal by the expression validator/parser.

TC-CALC-012 · Standalone MyCalc requests no Android permissions · FAIL

Expected: No requested Android permissions
Observed: Requested permissions: app.space.calc.DYNAMIC_RECEIVER_NOT_EXPORTED_PERMISSION
QA interpretation: The installed standalone package requests one or more Android permissions.

TC-CALC-008 · Chained calculations retain unrounded precision · FAIL

Expected: 1
Observed: MyCalc | STANDALONE | 0.9999999999
QA interpretation: After 1 ÷ 3 =, the UI result was ['MyCalc', 'STANDALONE', '0.3333333333']; multiplying by 3 did not return 1. This is consistent with the screen feeding its rounded display string back into the next expression.

TC-CALC-009 · Scientific-notation result can be used in the next expression · FAIL

Expected: Continue from 1e+15 without Error
Observed: MyCalc | STANDALONE | 1e+15+1 | Error
QA interpretation: Initial 10^15 display was ['MyCalc', 'STANDALONE', '1e+15']; adding +1 left an unchanged exponent result or produced Error. This is consistent with exponent-formatted display text not being accepted as a numeric literal by the expression validator/parser.

D3 · Evaluate with a trailing plus · FAIL

Expected: 5+ then equals shows 10
Observed: CALCULATOR | 5
QA note: Pressing equals after 5+ did not produce 10.

B1 · Hold number to select and show actions · FAIL

Expected: Visible selection and Cut/Copy actions
Observed: MySpace home; MySpace; CALCULATOR; History; World time; More options; 1,23,456; = 1,23,456; Toggle the scientific keys; Open the extra keys; AC; ( ); %; ÷; 7; 8; 9; ×; 4; 5; 6; −; 1; 2; 3; +; 0; .; ⌫; =; Apps; Clock; Calculator
QA note: The expected selection action menu did not appear after a 650 ms hold on the typed number.

B2 · Drag while holding to change the selected portion · FAIL

Expected: Selection changes during an uninterrupted hold-and-drag
Observed: MySpace home; MySpace; CALCULATOR; History; World time; More options; 1,23,456; = 1,23,456; Toggle the scientific keys; Open the extra keys; AC; ( ); %; ÷; 7; 8; 9; ×; 4; 5; 6; −; 1; 2; 3; +; 0; .; ⌫; =; Apps; Clock; Calculator
QA note: No selection action UI was visible after the hold-then-drag gesture.

D3 · Evaluate with a trailing plus · FAIL

Expected: 5+ then equals shows 10
Observed: MyCalc | STANDALONE | 5
QA note: Pressing equals after 5+ did not produce 10.

B1 · Hold number to select and show actions · FAIL

Expected: Visible selection and Cut/Copy actions
Observed: World time; MyCalc; STANDALONE; History; More options; 1,23,456; = 1,23,456; Toggle the scientific keys; Open the extra keys; AC; ( ); %; ÷; 7; 8; 9; ×; 4; 5; 6; −; 1; 2; 3; +; 0; .; ⌫; =
QA note: The expected selection action menu did not appear after a 650 ms hold on the typed number.

B2 · Drag while holding to change the selected portion · FAIL

Expected: Selection changes during an uninterrupted hold-and-drag
Observed: World time; MyCalc; STANDALONE; History; More options; 1,23,456; = 1,23,456; Toggle the scientific keys; Open the extra keys; AC; ( ); %; ÷; 7; 8; 9; ×; 4; 5; 6; −; 1; 2; 3; +; 0; .; ⌫; =
QA note: No selection action UI was visible after the hold-then-drag gesture.

MyCalc permission wording

TC-CALC-012: FAIL
Direct dump interpretation: TC-CALC-012 FAIL: requested=app.space.calc.DYNAMIC_RECEIVER_NOT_EXPORTED_PERMISSION; protection level(s)=signature; runtime section=empty. This is PackageManager manifest/package evidence; the screen flow did not test a system permission prompt.
Guide claim: The literal “zero requested permissions” claim conflicts with the installed APK's PackageManager list. Runtime prompt behavior was not exercised by this PackageManager audit; the test does not infer that any listed permission is dangerous.

Important environment boundary

Android 14 emulator interaction and accessible UI text can differ from physical devices. A BLOCKED/ERROR row is not treated as an app defect without a clear app-controlled failure; an unexecuted guide step stays untested. The Diagnostics screen is only smoke-opened; local save/share is not tested. Runner logcat is supplemental evidence, not a substitute for product behavior; no external share target is used.

MyCalc · PackageManager permission dump

Extract from the original runtime artifact; complete dump is in the published evidence folder.

6. Machine-evidence manifest and reproducibility

The published sidecar folder contains 3 per-job user journey JSON reports, their calculator-case JSON outputs, markdown summaries, original screenshots, UI hierarchy XML, and an evidence-manifest.json with byte sizes and SHA-256 hashes. Use the single PDF link for the readable report; the linked GitHub run and report-folder sidecars provide raw rerun proof.

Suite	App	Evidence files	Screenshots
myspace-core	MySpace	51	29
myspace-modules	MySpace	29	13
mycalc	MyCalc	56	31

Method: three API 34 emulator shards, screenshot capture after user actions, visible UI labels and hierarchy evidence where available, per-case JSON outputs, exact binary SHA verification, and a pinned guide/source commit. The app's source tests are useful corroboration only; this report's PASS/FAIL statuses come from direct installed APK interactions.
